

Diversified Technique

The most commonly used chiropractic technique; Diversified Technique involves a high-velocity, low-amplitude thrust in a precise place and precise direction to restore proper alignment and movement to the spine and joints.

As spinal integrity improves, nerve tension is reduced and the body works better; think of it as an “energy shot” to the spine that your body uses to “right” itself.

The direction, speed, depth and angle used is specific to the patient’s condition and is arrived at through Dr. Miller’s experience and understanding of spinal mechanics.
